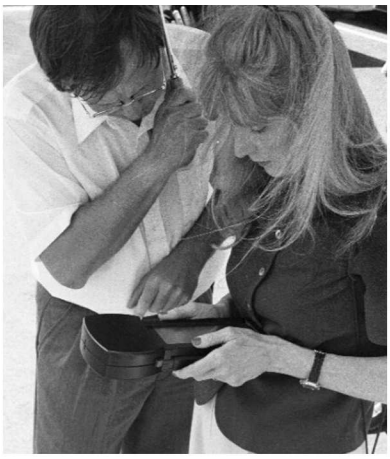
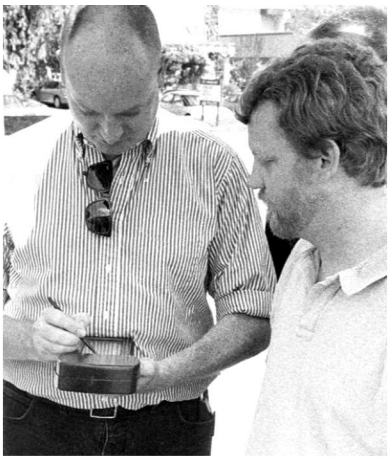
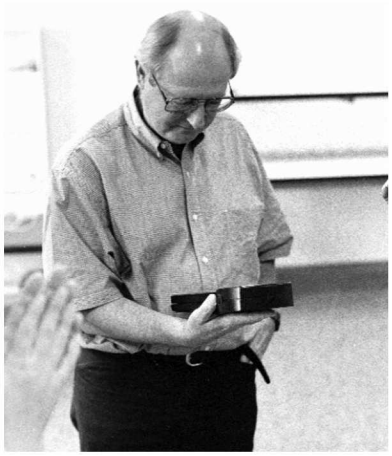
GeoVector

Title: Little Guy (PE-GV: LG-O1-2003)







Dmitri Antonets (SET), Pam Kerwin, Tom Ellenby, Dave Gallatin (SET), and John Ellenby at Little Guy's Debut, SET Engineering, Morgan Hill CA, May 1998

The "Little Guy," "Clipper" project was initiated in 1998 after the company filed its first patent (information regarding this and other GeoVector patents can be found online at http://www.geovector.com/ip/patentgallery.html) relating to a hand held non visual 'pointable' information appliance. SET engineering were contracted to make and program the device.

Project manager for GeoVector – Peter Ellenby
Project manager for SET Engineering – Dave Gallatin
SET Software programmers – Jeff Bahr & Dmitri Antonets

Four Little Guys and a proprietary program to make databases for the devices were delivered in May 1998. They have been demo'd around the world including Helsinki, Tokyo, and many US locations. There was a notable demo to John Young, then with HP, on August 11th 1998.

One note; The company, known as Criticom Corporation at the inception of the project, was undergoing a name change while the project was being fulfilled. SET's correspondence to GeoVector uses the names Criticom, Tengotech (a name settled on and then thankfully discarded for GV) and GeoVector. Three names but one company.
